

PRESS RELEASE

SHF Communication recognized by Frost & Sullivan for Outstanding Product Line

Strategy:

Innovative SHF 10000 BERT Series has End-Users in Mind

Berlin, September 17, 2008 – SHF Communication Technologies AG receives Frost & Sullivan's 2008 Global Product Line Strategy Award. The award is dedicated to the company's SHF 10000 bit error rate test platform which is used by research institutions and network equipment manufacturers worldwide in the development of next-generation data transmission networks. The equipment allows for the precise measurement of transmission quality. Dr. Frank Hieronymi, CEO of SHF states "Our systems are designed by engineers for engineers. This is reflected by the suitability for daily use. We are proud that our efforts are recognized with this prestigious award."

Along with flexibility and system comprehensiveness, the key factor for this decision was the wide area of applications. In addition to 10 and 40 Gbps applications, the system already supports the development of the future 100 Gbps Ethernet standard, which makes it a future-proof investment. Its modular approach and the availability of optical transmitters for various modulation formats, as well as further modules like optical receivers and clock recoveries, smoothly allow for assembly of complete systems for testing of different optical and electrical transmissions. In particular the ease of use has to be emphasized, which enables novices and experts alike to fulfill their measurement tasks comfortably and completely.

Jessy Cavazos, Frost & Sullivan Industry Manager, said "Our market research on the currently available BERT market clearly demonstrated that SHF is an ideal choice for telco and research customer. The SHF solution scores highly in all categories but

particularly in its ease of use and profound insight into customers' needs and product demands.”

For SHF, this award is also a recognition of the company's strategy to offer customized products. The instruments are developed in close contact with the customers and are continuously adapted to market needs. Furthermore, essential components have been designed by SHF internally.

“We will continue our efforts to offer best- in-class products to our customers that are tailored to their individual demands in the best possible way and enable them to develop the next generation of network equipment,” explains Dr. Hieronymi.

About SHF Communication Technologies AG:

SHF Communication Technologies is a technology company, active in high-speed data transmission and industrial automation. The communication division develops and manufacturers components and measurement instruments for high-speed data communication. Customers are telecom providers, network equipment manufacturers and research institutes. The automation division develops and produces computer modules according to the requirements of the customers. These computer boards are used for industrial control applications in railway and ship technology as well as in large industrial plants. For further information, visit <http://www.shf.de>.

About Frost & Sullivan:

Frost & Sullivan, the Growth Partnership Company, partners with clients to accelerate their growth. The company's TEAM Research, Growth Consulting and Growth Team Membership™ empower clients to create a growth-focused culture that generates, evaluates and implements effective growth strategies. Frost & Sullivan employs over 45 years of experience in partnering with Global 1000 companies, emerging businesses and the investment community from more than 30 offices on six continents. For more information about Frost & Sullivan's Growth Partnership Services, visit <http://www.awards.frost.com>.
