the bandwidth company

EPLGW - Ethernet to Ethernet Powerlink Gateway

EtherControl

The EPLGW is an interface module to an Ethernet Powerlink real time network from a non real time Ethernet network or device. It can act as a gateway or type 1 router to the real time network.

The Gateway has an integrated web server for configuration and Ethernet Powerlink network monitoring and diagnosis.

DIN-Rail mount and wide power-supply range from 12 to 60V DC.
